

ABSTRACT

A tablet packing apparatus arranged to prevent tablets from bouncing in a tablet drop guide path so that dropping time of the tablets can be shortened so as to be ready in time for packing.

- 5 The tablet packing apparatus is provided with a tablet drop guide path (12) that guides tablets to a packing unit. The tablets drop obliquely downward from each of tablet outlets (10) of tablet feeders (8) provided in an up and down direction in a manner of a multistage shelf, wherein a bounce preventing member (14) is provided in a position opposing the tablet outlets of the tablet drop guide path, and the bounce preventing member (14) is obliquely provided so that it recedes
- 10 from the tablet outlets 10 toward the lower end.
